

# DIABETEGEN OINTMENT RECOMMENDATION

## Doctors, nurses, palliative care specialists

“Patients undergoing oncological therapies require increased supervision of nursing staff, close observation and rapid as well as effective action.

Patients undergoing chemotherapies, who suffered from post-transfusion lesions observed on the injection site, underwent an intensive treatment with DIABETEGEN.

The regression of lesions which appeared after the administration of 5 Fluorouracyl was observed in 70% of patients.

Lesion progression was not observed in any of the patients using DIABETEGEN.

On the basis of the study results, DIABETEGEN received the best evaluation compared with other products healing wounds available on the Polish market.”

- ***Observational study conducted in the Oncology Department at the Magodent Hospital at A.E. Fieldorf "Nil" 40 in Warsaw. The study was conducted by Health Care Manager Agnieszka Staniak***

“For over a year I have been using Diabetegen and Diabetegen Forte creams in my diabetic patients, for various indications, mostly in cases of long-unhealing or unhealing wounds (trophic ulcerations of the shin etc.). In each case the tissue regeneration process was stimulated so effectively, that the healing process was visibly faster than on average. I did not observe any adverse effects, including allergic reactions.

I am very pleased with the effects of Diabetegen and Diabetegen Forte in my patients, and I can recommend this product as reliable and effective in various skin tissue complications.”

- ***Mariusz Dąbrowski, PhD, M.D. Specialist in internal medicine, Diabetologist***

„ DIABETEGEN is a very good choice in wounds healing, from Simple ones to complicated like diabetic foot wounds. Its complex and complete composition offers a good support to facilitate tissue healing (regeneration) in all kind of trophic injuries in diabetic patients ”

- ***Dr. Simona Carniciu, PhD Doctor in Diabet, National Institute of Diabet, Nutrition and Metabolic Diseases Nicolae Paulescu, Executive Secretary of the Romanian Medical Association***

“DIABETEGEN is a product that helps professionals in diabetic foot care with outstanding results in rapid healing of wounds, from simple cracks to large ulcers. It is well tolerated in terms of Allergy and has a complex composition and texture with polyvalent effects and is welcome in therapeutic arsenal aimed at particularly vulnerable category of care for patients.”

- ***Dr Anca- Elena Craciun, Asisstant Professor Department of Diabetes, Nutrition, metabolic diseases University of Medicine and Pharmacy "Iliu Hatieganu" Cluj- Napoca, Specialist diabetes, nutrition, metabolism diseases "Regina Maria" Cluj- Napoca***

“Although DIABETEGEN has been created for diabetic patients I’ve used successfully for treating patients who was non-diabetic but had various skin disorders- bedsores, burns. The evolution of patients was significantly improve by Healderm bringing the healing very fast. Also DIABETEGEN is very well tolerated by patients.

- ***Dr. Ana- Maria Oprolu, MD, lecturer, PhD in Health sciences, Palstic surgery/ Hand surgery/Aesthetic surgery University Hospital Bukarest***

I used DIABETEGEN several times at the professional and personal level and in both levels it was really amazing.

I used with my patients who have small and big wounds, burns, dryness and many other conditions and it works very well.

I started using it when I was having a surgical wound and it was not healing maybe because I am diabetic. And I was surprised when I saw my wound healing within 3 days only. I also saw it's fantastic effect when I used it for my father nail which was having a crack for years and within 2 days only it closed.

I strongly recommend this wonderful DIABETEGEN to every individual wants to improve his skin wound, burn, scar and dryness

- ***Dr. Ebtihal Darwish is a Consultant Family Physician, Professor – Gulf University Ajman and Chief Compliance Officer TruDoc.
